

PACE 44 S

The ***PACE 44 S*** is a water-cooled 2-cylinder in-line engine which is equipped with a pressure oil circuit and an electronic multi point fuel injection system and charged by a compressor. Due to the low fuel consumption the engine is particularly well suited for UAVs with a long operating time.

The outstanding features of the ***PACE 44*** series are outstanding thermodynamic properties (specific fuel consumption), power density and optionally large installed electrical power generation.

PACE ENGINES

PACE 44 S

TECHNICAL DATA

Displacement:	44 cc
Rated speed:	10,000 rpm
Propeller speed:	6,000 rpm
Power:	5kW / 6,8 HP
Weight:	
engine without ancillaries:	4.5 kg
total package approx:	6 kg

FEATURES

- Pressure oil circulation lubrication
- Water cooling
- Multipoint gasoline injection
- Generator optional
- Compressor
